5GC OMC Http External Restful Interfaces

1 状态管理

- URI:

```
/api/rest/systemManagement/v1/elementType/{elementTypeValue}/objectType/systemState
```

说明：

```
** elementTypeValue=smf/amf/..查询的网元网元类型
```

- Method:

  GET

- Return:

```
"data": [
    {
        "AMF_0": {
            "error": {
                "errorCode": "1",
                "errorInfo": "Internal server error, NF connnect refused"
            },
            "ipAddress": "192.168.2.188"
        }
    },
    {
        "SMF_0": {
            "ipAddress": "192.168.1.232",
            "systemState": {

                    "version": "1.5.3.3"
                }
            }
        }
    ]
}
```

2 故障管理

2.1 告警上报

- URI

```
/api/rest/faultManagement/v1/elementType/{elementTypeValue}/objectType/alarms
```

- Method

  POST

- Relation

  NF->OMC

- Body

```
type Alarm struct {
    AlarmSeq          int    `json:"alarmSeq"`
    AlarmId           string `json:"alarmId"`
    NeId              string `json:"neId"`
    AlarmCode         int    `json:"alarmCode"`
    AlarmTitle        string `json:"alarmTitle"`
    EventTime         string `json:"eventTime"`
    AlarmType         string `json:"alarmType"`
    OrigSeverity      string `json:"origSeverity"`
    PVFlag            string `json:"pvFlag"`
    NeName            string `json:"neName"`
    NeType            string `json:"neType"`
    ObjectName        string `json:"objectName"`
```

```
    LocationInfo      string `json:"locationInfo"`
    Province          string `json:"province"`
    AlarmStatus       int    `json:"alarmStatus"`
    SpecificProblem   string `json:"specificProblem"`
    SpecificProblemID string `json:"specificProblemID"`
    AddInfo           string `json:"addInfo"`
}
```

2.2 获取网元告警

- URI

```
/api/rest/faultManagement/v1/elementType/{elementTypeValue}/objectType/alarms
```

- Method

  GET

- Relation

  OMC->NF

- Body

  n/a

- Return

```
type Alarms struct {
    Alarms []struct {
        AlarmSeq          int    `json:"alarmSeq"`
        AlarmId           string `json:"alarmId"`
        NeId              string `json:"neId"`
        AlarmCode         int    `json:"alarmCode"`
        AlarmTitle        string `json:"alarmTitle"`
        EventTime         string `json:"eventTime"`
        AlarmType         string `json:"alarmType"`
        OrigSeverity      string `json:"origSeverity"`
        PVFlag            string `json:"pvFlag"`
        NeName            string `json:"neName"`
        NeType            string `json:"neType"`
        ObjectName        string `json:"objectName"`
        LocationInfo      string `json:"locationInfo"`
        Province          string `json:"province"`
        AlarmStatus       int    `json:"alarmStatus"`
        SpecificProblem   string `json:"specificProblem"`
```

```
        SpecificProblemID string `json:"specificProblemID"`
        AddInfo           string `json:"addInfo"`
    } `json:"Alarms"`
}
```

3 配置管理

3.1 参数配置表

- 类型定义（type）
  - string

    > filter指定字符串长度，如："filter": "6~100" , 字符串的长度范围，如果单个数字表示最大长度

  - ipv4

    > filter忽略

  - ipv6

    > filter忽略

  - int

    > filter指定整型数的范围，如："filter": "100~999"

  - enum

    > "filter": '{"0": "http", "1": "https"}'

  - bool

    > "filter": '{"0": "false", "1": "true"}'

  - regex

    > filter为正则表达式

- 可选（optional）

- true，默认值，表示该字段为可选填，没有写该属性项时optional为true（兼容以前配置文件）
- false，表示必填项

- Example

```
UDM:
system:
    display: "System"
    list:
      - name: "serviceIP"
        type: "ipv4"
        value: "172.16.5.140"
        optional: "false"
        access: "read-write"
        filter: ''
        display: "Service IP"
        comment: ""
      - name: "servicePort"
        type: "int"
        value: "8080"
        access: "read-write"
        filter: "0~65535"
        display: "Service Port"
        comment: "0~65535"
subsSmfSelection:
    display: "Subs Smf Selection"
    array:
      - name: "index"
        type: "int"
        value: "0"
        access: "read-write"
        filter: '0~15'
        display: "Index"
        comment: "0~15"
      - name: "name"
        type: "string"
        value: 'def_ambr'
        access: "read-write"
        filter: '^.{1,32}$'
        display: "Name"
        comment: "0~32"
      - name: "snssai"
        type: "string"
        value: '1-000001'
        access: "read-write"
        filter: '^\d{1,3}[A-Fa-f0-9]{6}$'
        display: "Snssai"
        comment: ""
      - name: "dnnList"
        type: "int"
        value: '0'
        access: "read-write"
        filter: '0~3'
```

```
        display: "Dnn List"
        comment: ""
        array:
          - name: "index"
            type: "int"
            value: "0"
            access: "read-write"
            filter: '0~15'
            display: "index"
            comment: "0~15"
          - name: "dnn"
            type: "string"
            value: 'cmnet'
            access: "read-write"
            filter: '^.{1,32}$'
            display: "Dnn"
            comment: "0~32"
          - name: "defaultDnnInd"
            type: "bool"
            value: 'true'
            access: "read-write"
            filter: 'false;true;'
            display: "default Dnn Indicator"
            comment: ""
```

完整文件具体请参考 udm_param_config.yaml

3.2 获取参数

- URI

```
/api/rest/systemManagement/v1/elementType/{elementTypeValue}/objectType/config
/{paraName}?loc={index0}/{paraName1}/{index1}/...
```

说明

```
elementTypeValue: udm, smf, amf... 网元类型
udm paraName: system, subsUEAmbr, subsSmfSelection ...
非array的参数，忽略loc
```

- Params
  - loc 多层表的定位信息
- Method

> GET

- Return

```
/api/rest/systemManagement/v1/elementType/udm/objectType/config/system
```

```
{
    "data": [
        {
            "serviceIP": "172.16.5.140",
            "servicePort": "8080",
            "...": "..."
        }
    ]
}
```

```
/api/rest/systemManagement/v1/elementType/udm/objectType/config/subsSmfSelecti
on?loc=1/dnnList
```

```
{
    "data": [
        {
            "index": "0",
            "dnn": "cmnet",
            "...": "..."
        },
        {
            "index": "1",
            "dnn": "ims",
            "...": "..."
        }
    ]
}
```

3.3 配置参数

- URI

```
/api/rest/systemManagement/v1/elementType/{elementTypeValue}/objectType/config
/{paraName}?loc={index0}/{paraName1}/{index1}
```

- Params
  - loc 多层表的定位信息
- Method

  > POST/PUT/DELETE

  说明：

  ```
  单层表不支持POST/DELETE操作
  ```

- Body

  ```
  {
      "serviceIP": "172.16.5.140",
      "servicePort": "8080",
      "...": "..."
  }
  ```

  说明：

  ```
  DELETE操作不带Body
  ```

3.4 创建网元

- URI

  ```
  /api/rest/systemManagement/v1/elementType/{elementTypeValue}/objectType/neInfo
  ```

- Params

  N/A

- Method

  > POST

- Body

```
{

}
```

4 性能管理

4.1 任务管理

- URI

```
/api/rest/performanceManagement/v1/elementType/{elementTypeValue}/objectType/measureTask?id={taskId1}&id={taskId2}
```

- Method

  POST/PUT/DELETE/PATCH

- Params

  taskId=1&taskId=2

  - POST: 增加测量任务，激活任务，不带id参数，id在body
  - PUT： 修改测量任务，激活任务，不带id参数，id在body
  - DELETE：删除测量任务，不需要带body，带id参数，可带多个
  - PATCH: 暂停测量任务，不需要带body，带id参数，可带多个

  测量任务创建/修改后暂时存储在OMC数据库，激活任务时再下发到网元

- Relation NF

  OMC -> NF/NF -> OMC

- Body

  下发测量任务的报文结构

```
type MeasureTask struct {
    Tasks []struct {
        Id int `json:"Id"`

        StartTime string `json:"StartTime"`
        EndTime   string `json:"EndTime"`

        Schedule struct {
            Type    string `json:"Type"` // 计划类型：Weekly/Monthly，如果type
为""，则任务以StartTime和EndTime为条件进行统计，否则以Shedule方式进行
            Days    []int  `json:"Days"` // Weekly: [0,1,...5,6]，0~6表示星期日
~星期六，Monthly: [1,2,3,...,30,31]一个月的几天
            Periods []struct {
                Start string `json:"Start"` // 零点或者零点加测量粒度的整数倍
00:15:00
                End   string `json:"End"`   // 零点加测量粒度的整数倍 08:45:00,
16:15:00
            } `json:"Periods"`
        } `json:"Schedule"`

        GranulOption string `json:"GranulOption"` // 测量粒度选项：
15M/30M/60M/24H

        KPISet []struct {
            Code string   `json:"Code"` // 统计编码 如：SMFHA01
            KPIs []string `json:"KPIs`  // 指标项集合
["SMF.AttCreatePduSession", "SMF.AttCreatePduSession._Dnn"]
        } `json:"KPISet"`
    } `json:"Tasks"`

    NotifyUrl string `json:"NotifyUrl"` /* 数据上报URL
"http://x.x.x.x:xxxx/api/rest/performanceManagement/v1/elementType/smf/objectT
ype/measureReport" */
}
```

- Return

4.2 订阅任务数据上报

- URI

```
/api/rest/performanceManagement/v1/elementType/{elementTypeValue}/objectType/m
easureReport
```

- Method

  POST

- Relation

  NF -> OMC

- Body

  网元返回测量数据的报文结构

```
type MeasureReport struct {
    Id        int    `json:"Id"`
    Timestamp string `json:"TimeStamp"`
    NeName string `json:"NeName"`
    RmUID  string `json:"rmUID"`
    NeType string `json:"NeType"`

    Report struct {
        Period struct {
            StartTime string `json:"StartTime"`
            EndTime   string `json:"EndTime"`
        } `json:"Period"`

        Datas []struct {
            Code string `json:"Code"` // 统计编码 如：SMFHA01
            KPIs []struct {
                KPIID     string `json:"KPIID"` // 指标项，如：
SMF.AttCreatePduSession._Dnn
                KPIValues []struct {
                    Name  string `json:"Name"` // 单个的写"Total"，或者指标项有
多个测量项，如Dnn的名称写对应的Dnn"cmnet"/"ims"
                    Value int64    `json:"Value"`
                } `json:"KPIValues"`
            } `json:"KPIs"`
        } `json:"Datas"`
    } `json:"Report"`
}
```

4.3 黄金指标上报

- URI

```
/api/rest/performanceManagement/v1/elementType/{elementTypeValue}/objectType/k
piReport/{index}
```

  index取值范围： 0-1439

- Method

POST

- Body

```
type KpiReport struct {
    Timestamp string `json:"TimeStamp"`
    Task      struct {
        Period struct {
            StartTime string `json:"StartTime"`
            EndTime   string `json:"EndTime"`
        } `json:"Period"`
        NE struct {
            NEName string `json:"NEName"`
            RmUID  string `json:"rmUID"`
            NeType string `json:"NeType"`
            KPIs   []struct {
                KPIID string `json:"KPIID"`
                Value int    `json:"Value"`
                Err   string `json:"Err"`
            } `json:"KPIs"`
        } `json:"NE"`
    } `json:"Task"`
}
```

4.4 测量数据主动上报

- URI

```
/api/rest/performanceManagement/v1/elementType/{elementTypeValue}/objectType/measurement/{index}
```

- Method

  POST

- Relations

  NF -> OMC

- Params

  NA

- Body

网元主动上报测量数据的报文结构

```
 type Measurement struct {
    Index     int    `json:"Index"`    // 1天当中测量时间粒度(如15分钟)的切片索引: 0~95
    Timestamp string `json:"TimeStamp"`
    NeName string `json:"NeName"` // UserLabel
    RmUID  string `json:"rmUID"`
    NeType string `json:"NeType"`  // 网元类型
    PmVersion string `json:"PmVersion"` // 性能数据版本号
    Dn     string `json:"Dn"`  // (???)网元标识, 如:RJN-CMZJ-TZ,SubNetwork=5GC88,ManagedElement=SMF53456,SmfFunction=53456
    Period string `json:"Period"` // 测量时间粒度选项: 5/15/30/60
    TimeZone string `json:"TimeZone"` // 时区, 如: "UTC+8"
    StartTime string `json:"StartTime"`

    Datas []struct {
        ObjectType string `json:"ObjectType"` // 网络资源类别名称, Pm指标项列表中为空间粒度 如: SmfFunction
        KPIs []struct {
            KPIID     string `json:"KPIID"` // 指标项, 如: SMF.AttCreatePduSession._Dnn
            KPIValues []struct {
                Name  string `json:"Name"` // 单个的写"Total", 或者指标项有多个测量项, 如Dnn的名称写对应的Dnn"cmnet"/"ims"
                Value int64    `json:"Value"`
            } `json:"KPIValues"`
        } `json:"KPIs"`
    } `json:"Datas"`
}
```

- Return

  Code: 204, no content

4.5 测量数据获取/补采

- URI

```
/api/rest/performanceManagement/v1/elementType/{elementTypeValue}/objectType/measurement/{index}
```

- Method

  GET

- Relations

  OMC -> NF

- Params

  NA

- Body

  NA

- Return

  网元返回测量数据的报文结构

```
type Measurement struct {
    Index     int    `json:"Index"`        // 1天中测量时间粒度(如15分钟)的切片索引: 0~95
    Timestamp string `json:"TimeStamp"`
    NeName string `json:"NeName"` // UserLabel
    RmUID  string `json:"rmUID"`
    NeType string `json:"NeType"`  // 网元类型
    PmVersion string `json:"PmVersion"` // 性能数据版本号
    Dn     string `json:"Dn"`  // (???)网元标识, 如:RJN-CMZJ-TZ,SubNetwork=5GC88,ManagedElement=SMF53456,SmfFunction=53456
    Period string `json:"Period"` // 测量时间粒度选项: 5/15/30/60
    TimeZone string `json:"TimeZone"`
    StartTime string `json:"StartTime"`

    Datas []struct {
        ObjectType string `json:"ObjectType"` // 网络资源类别名称, Pm指标项列表中为空间粒度 如: SmfFunction
        KPIs []struct {
            KPIID     string `json:"KPIID"` // 指标项, 如: SMF.AttCreatePduSession._Dnn
            KPIValues []struct {
                Name  string `json:"Name"` // 单个的写"Total", 或者指标项有多个测量项, 如Dnn的名称写对应的Dnn"cmnet"/"ims"
                Value int64    `json:"Value"`
            } `json:"KPIValues"`
        } `json:"KPIs"`
    } `json:"Datas"`
}
```

5 跟踪管理

5.1 订阅管理

- 创建订阅
  - URI

    ```
    /api/rest/traceManagement/v1/subscriptions
    ```

  - Method

    POST

  - Relations

    OMC front-end->OMC back-end, OMC -> NF

  - Body

    ```
    type TraceTask struct {
      TraceType  string   `json:"traceType"`
      StartTime  string   `json:"startTime"`
      EndTime    string   `json:"endTime"`
      Imsi       string   `json:"imsi"`
      Msisdn     string   `json:"msisdn"`
      SrcIp      string   `json:"srcIp"`
      DstIp      string   `json:"dstIp"`
      SignalPort int16    `json:"signalPort"`
      NeType     string   `json:"neType"`
      NeId       string   `json:"neId"`
      UeIp       string   `json:"ueIp"`
      Interfaces []string `json:"interfaces"`
    }
    ```

    Example:

    ```
    {
      "traceType": "Interface",
      "startTime": "2023-07-04 13:00:00",
      "endTime": "2023-07-04 19:00:00",
      "neType": "UDM",
      "neId": "SZ_01",
      "interfaces": ["N8","N10"]
    }
    ```

- Return

  Code=204 non-content

- 修改订阅
  - URI

    ```
    /api/rest/traceManagement/v1/subscriptions
    ```

  - Method

    PUT

  - Relations

    OMC front-end->OMC back-end, OMC -> NF

  - Body

    ```
    type TraceTask struct {
      Id         int      `json:"id"`
      TraceType  string   `json:"traceType"`
      StartTime  string   `json:"startTime"`
      EndTime    string   `json:"endTime"`
      Imsi       string   `json:"imsi"`
      Msisdn     string   `json:"msisdn"`
      SrcIp      string   `json:"srcIp"`
      DstIp      string   `json:"dstIp"`
      SignalPort int16    `json:"signalPort"`
      NeType     string   `json:"neType"`
      NeId       string   `json:"neId"`
      UeIp       string   `json:"ueIp"`
      Interfaces []string `json:"interfaces"`
    }
    ```

    Example:

    ```
    {
      "id": 1,
      "traceType": "Interface",
      "startTime": "2023-07-04 13:00:00",
      "endTime": "2023-07-04 19:00:00",
      "neType": "UDM",
      "neId": "SZ_01",
    ```

```
  "interfaces": ["N8","N10", "N11"]
}
```

- Return

  Code=204 non-content

- 删除订阅
  - URI

    ```
    /api/rest/traceManagement/v1/subscriptions?id={id1}&id={id2}
    ```

  - Method

    DELETE

  - Relations

    OMC front-end->OMC back-end, OMC -> NF

  - Params

    id：订阅任务id，支持多个

  - Body

    NA

  - Return

    Code=204, non-content

- 查询订阅 (暂不实现，直接从数据库查询)
  - URI 查询单个订阅：

    ```
    /api/rest/traceManagement/v1/subscriptions?id={id}
    ```

    查询所有订阅：

```
/api/rest/traceManagement/v1/subscriptions
```

- Method

  GET

- Body

  NA

- Return

```
{
  "data": [
    {
      "id": 1,
      "traceType": "Interface",
      "startTime": "2023-07-04 13:00:00",
      "endTime": "2023-07-04 19:00:00",
      "neType": "UDM",
      "neId": "SZ_01",
      "interfaces": ["N8","N10", "N11"]
    }
  ]
}
```

6 操作维护

6.1 MML命令

6.1.1 MML命令格式

- 命令格式

```
oper object:parameter1={value1},parameter2={value2},parameter3={value3};
```

  - 操作(operation)

        - 根据实际操作可选用如下动作，如果没有合适的可自行增加，要做到简洁直观

```
add: 增加
mod(set): 修改/设置
del(rmv): 删除
dsp(lst): 查询显示
bak: 备份
exp: 导出
imp: 导入
bat: 批量
exec(run): 执行
act/dea: 激活/去激活
```

        - 与对象之间采用空格分隔

    - 对象(object)

        - 操作的对象，如签约数据(sub/udmuser)/鉴权数据(auth/authdat), n7接口(n7server)
        - 对象名称用所操作对象的英文名(或缩写), 为字母或者数字的组合, 不含空格, "-", "_"等特殊字符
        - 使用":"与参数进行分隔

    - 参数(param)

        - 参数名采用英文常用名/约定俗成的缩写/缩略语等, 如imsi，msisdn，ip，port等, 为字母或者数字的组合, 不含空格, "-", "_"等特殊字符
        - 参数值为字符串, 如有":", ",", ";", "\"字符, 需加"\"进行转义
        - 参数之间用","进行分隔

    - 命令结束符";", 操作/对象/参数均采用小写字母（HW采用的都是大写字母）

- 目前现有的各个网元的命令格式

  除了UDM签约数据/鉴权数据的MML格式和上述格式基本一致, 各个网元的系统参数MML都不一样, 需统一成上述格式

    - UDM鉴权数据/签约数据

```
add
authdat:imsi=460000100000030,ki=805DADC6E8A54A0D59D622C7A04D08E0,amf=800
0,algo=0,opc=CF7FD414E05754CFE08B4FE7F2EF2A36
```

- UDM系统参数

```
set n8ip 172.16.5.130
```

- AMF系统参数

```
set n8_ip 192.168.1.121
```

- SMF/UPF系统参数

```
set n7 server <http|https> <ip> <port>
```

6.2 MML接口

- URI

```
/api/rest/opeartionManagement/v1/elementType/{elementTypeValue}/objectType/mml
?ne_id={neId}
```

- Related NF

  OMC front-end -> OMC back-end

  OSS -> OMC (北向接口)

- Params

  ne_id={neId}

- Method

  POST

- Body

```
{
    "mml": [
```

```
        "date",
        "list ver",
        "list lic",
        "list comm"
    ]
}
```

- Return

```
{
  "data": [
      "2023-05-11 17:52:32.37333745 +0800 CST m=+28762.188435351\n",
      "16.1.1\n",
      "Expiry date: 2024-12-31, sn: 13740272\n",
      "COMMAND NOT FOUND, opr: list, obj: comm\n"
  ]
}
```

7 北向资源配置数据接口

7.1 查询资源数据接口

- URI

```
/api/rest/resourceManagement/{apiVersion}/elementType/{elementTypeValue}/objec
tType/{objectTypeValue}?rmUIDs={rmUIDValues}&fields={attributeNames}
```

- Related NF

  OMC -> NF

  OSS -> OMC (北向接口)

- Params

  - rmUIDs={rmUIDValues}

    可携带多额rmUID(统一资源定位符), OMC->NF不带

  - fields={attributeNames}

属性域集合={属性名列表}, 指定资源对象多个属性名的英文逗号分割，一个属性名时无英文逗号。

- Method

  GET

- Body

```
GET /api/rest/resourceManagement/v1/elementType/SMF/objectType/ManagedElement?
rmUIDs=1101AGTHXSMF0000015704000100&fields=UserLabel HTTP/1.1
accessToken: 52661fbd-6b84-4fc2-aa1e-17879a5c6c9b
Host: serverIP:port
Content-Type: application/json; charset=UTF-8
Content-Length:…
{
}
```

- Return

```
HTTP/1.1 200 OK
Content - Type: application/json
Content-Length:…
{
  "data": [{
  "rmUID": "1101AGTHXSMF0000015704000100",
  "UserLabel": "SMFRJBJJC01",
  ...
    }]
}
```
